

The Ceraball® Principle is *en marche*. Local Tissue Engineering in Weeks, instead of Months.

boneArtis® personifies a story written by applied research during daily surgical work, starting in the basement and garage. Based on that history the bone forming elements were detected changing fundamentally the world of surgical interventions and - their outcome.

boneArtis® AG Munich with its manufacturing site in Switzerland at the lake of Vierwaldstatten is engaged since more than 20 years to work out alternatives to joint replacements and today **boneArtis®** represents the only alternative to the replacement-behavior. With the successful shift into dentistry, **boneArtis®** moves a step ahead of current treatments and defines the new *Gold Standard in [bone augmentation](#)*.

boneArtis® has revolutionized the art of bone reconstruction with **Ceraball®** and **MCB®** *the micro-chambered beads®*, by embodying today as the best carriers for tissue engineering, primary cancellous scaffold formation and defect healing of large cavities... both Dental and in Orthopaedics. Not in months, but in weeks. **boneArtis®** has enabled patients from all over the world a new quality of life ... and has been nominated for the «**[Innovation Life Award 2020](#)**» of the Bavarian Government...
